

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for outputting information comprising:  
accessing, by a computer system, information associated with an application  
~~accessible from a computer system located at a first location running on said computer system;~~  
receiving, by said computer system, a request to requesting output ~~[[of]]~~ said  
information to an electronic device;  
determining, by said computer system, a geographic location of said computer  
system;  
determining, by said computer system, a geographic location of said electronic  
device;  
determining, by said computer system, if said ~~first~~ geographic location of said  
computer system is remote to said geographic location of said electronic device; and  
if said ~~first~~ geographic location of said computer system is remote to said  
geographic location of said electronic device, preventing, by said computer system, output of  
said information to said electronic device.
2. (Original) The method as recited in Claim 1 wherein said electronic  
device is a printing device and said information represents an electronic representation of a  
document.
3. (Currently Amended) The method as recited in Claim 2 further  
comprising:  
determining a default printer associated with said application; and

if said default printer corresponds to a printer that is remote to said first geographic location of said computer system, automatically modifying said default printer ~~such that said default printer~~ to correspond to a printer that is local to said first geographic location of said computer system.

4. (Currently Amended) The method as recited in Claim 1 wherein said preventing output comprises rendering a user alert when said first geographic location of said computer system is remote to said geographic location of said electronic device.

5. (Original) The method as recited in Claim 4 further comprising allowing output of said information to said electronic device in response to a user validation.

6. (Original) The method as recited in Claim 1 wherein said preventing output comprises disabling a graphical icon or menu option on said computer system that is associated with said electronic device.

7. (Currently Amended) The method as recited in Claim 1 further comprising ~~[[:]]~~ determining said ~~first~~ geographic location of said computer system and said geographic location of said electronic device based on global positioning satellite (GPS) data.

8. (Original) The method as recited in Claim 1 further comprising:  
determining if said information is sensitive; and  
wherein said preventing output only prevents output if said information is sensitive.

9. (Currently Amended) The method as recited in Claim 1 further comprising determining said ~~first~~ geographic location of said computer system and said geographic location of said electronic device from network topography data.

10. (Currently Amended) A system ~~for detecting information output to a remote device~~ comprising:  
~~a first electronic device in a first location and comprising information;~~

~~an application accessible from said first electronic device and for requesting output of said information to a second electronic device in a second location;~~

~~a location determiner in communication with said first electronic device and for determining if said first location is remote to said second location; and~~

~~a data output request filter for filtering information output requests from said application if said first location is remote to said second location~~

a processing component configured to:

receive a request to output information to an electronic device;

determine a geographic location of said system;

determine a geographic location of said electronic device;

determine if said geographic location of said system is remote to said geographic location of said electronic device; and

if said geographic location of said system is remote to said geographic location of said electronic device, prevent output of said information to said electronic device.

11. (Currently Amended) The system as recited in Claim 10 wherein said ~~second~~ electronic device is a printing device.

12. (Currently Amended) The system as recited in Claim 11 wherein said ~~first~~ electronic device system further comprises a display screen for displaying a print icon associated with said printing device, and wherein ~~said filter is also for disabling preventing output of said information comprises disabling said print icon is disabled by said filter when said first location is remote to said second location.~~

13. (Currently Amended) The system as recited in Claim 10 further ~~comprising a modifier for modifying default settings associated with said application based on said first location and said second location wherein said modifier automatically selects a local electronic device to receive output from said first electronic device~~ wherein the processing component is further configured to:

determine a default output device setting; and

if said default output device setting corresponds to an output device that is remote to said geographic location of said system, automatically modify said default output device setting to correspond to an output device that is local to said geographic location of said system.

14. (Currently Amended) The system as recited in Claim 13 wherein said geographic location of said system and said geographic location of said electronic device are determined using ~~determiner uses~~ global positioning satellite (GPS) data ~~to determine said first and second locations.~~

15. (Currently Amended) The system as recited in Claim 13 wherein said geographic location of said system and said geographic location of said electronic device are determined using ~~determiner uses~~ network topography data ~~to determine said first and second locations.~~

16. (Currently Amended) The system as recited in Claim 10 wherein said ~~second~~ electronic device is a portable electronic device.

17. (Currently Amended) The system as recited in Claim 10 wherein said filter generates preventing output of said information comprises generating an alert when said second electronic device is remote to said first electronic device and temporarily suspends output to said second electronic device.

18. (Currently Amended) A method for printing comprising:  
accessing receiving, by a computer system, a request to output a data file associated with an application ~~accessible from a first electronic device situated at a first location~~ to a printer;

determining, by said computer system, ~~that said request targets a first printer a~~ geographic location of said computer system;

determining, by said computer system, ~~a geographic location associated with of~~ said first printer;

determining, by said computer system, if said ~~first~~ geographic location of said computer system is remote to said geographic location of said ~~first~~ printer; and

filtering, by said computer system, said request if said ~~first~~ geographic location of said computer system is remote to said geographic location of said ~~first~~ printer.

19. (Currently Amended) The method as recited in Claim 18 wherein said filtering comprises disabling a print icon or menu option associated with said ~~first~~ printer as displayed on said ~~first electronic device~~ computer system.

20. (Currently Amended) The method as recited in Claim 18 wherein said filtering comprises automatically modifying default print options of said ~~first electronic device~~ computer system such that said request is routed to a second printer local to said ~~first~~ geographic location of said computer system.

21. (Currently Amended) The method as recited in Claim 18 wherein ~~said~~ determining said geographic location of said computer system and ~~said first~~ printer comprises accessing global positioning satellite (GPS) data ~~associated with said first printer~~.

22. (Currently Amended) The method as recited in Claim 18 wherein ~~said~~ determining said geographic location of said computer system and ~~said first~~ printer comprises accessing network topography data ~~associated with said first printer~~.

23. (Currently Amended) The method as recited in Claim 18 further comprising generating an alert ~~on said first electronic device~~ when said ~~first~~ geographic location of said computer system is remote to said geographic location of said first printer and allowing said request to said ~~first~~ printer in response to a user validation.

24. (Original) The method as recited in Claim 18 further comprising:  
determining if said data file is sensitive; and  
wherein said filtering prevents output of said data file if said data file is sensitive.

25-27. (Canceled)

28. (New) A computer-readable storage medium storing instructions executable by a processor of a computer system, the instructions comprising:

- instructions that cause the processor to access information associated with an application running on the computer system;
- instructions that cause the processor to receive a request to output the information to an electronic device;
- instructions that cause the processor to determine a geographic location of the computer system;
- instructions that cause the processor to determine a geographic location of the electronic device;
- instructions that cause the processor to determine if the geographic location of the computer system is remote from the geographic location of the electronic device; and
- instructions that cause the processor to prevent output of the information to the electronic device if the geographic location of the computer system is remote from the geographic location of the electronic device.
